Fariha Rahman

STUDENT

About Me

For me, engineering is about bridging the gap between complex logic and human experience. As an AI researcher and front-end developer, I specialize in turning dense clinical data into actionable healthcare solutions. While my core expertise lies in Python, machine learning, and multi-modal diagnostics, my passion extends to the user's screen. I actively bridge the gap between back-end data and front-end usability, building collaborative software and responsive interfaces using React and Tailwind CSS. I bring a meticulous, research-driven mindset and a deep commitment to technical documentation, ready to help an AI engineering team build systems that are as scalable as they are impactful.

Sylhet, Bangladesh

Skills

- Machine Learning: Python, Data Science, Ensemble Classifiers, ResNet50V2, Clinical Data Analysis
- Web Development: React, Tailwind CSS
- Programming: C, C++, Python, Java
- Tools & Workflow: Git/GitHub, LaTeX, VS Code
- Collaboration: Technical Documentation, Project Structuring, Presentation Design

Language

- Bangla.
- English (Fluent)

Education

(2023 -Present)

Computer Science and Engineering

METROPOLITAN UNIVERSITY

Experiences

RESEARCH PROFILE:

- Authored research analyzing the temporal and socioeconomic drivers of antimicrobial resistance (AMR).
- Technical abstract accepted at the EFAST Conference based on these findings (2026).

PROJECTS:

Multi-Modal Diagnostic System:

- Built a machine learning-based diagnostic tool for an Artificial Intelligence course project.
- Utilized X-ray images and clinical datasets to train models for automated disease detection.

House Rental System:

- Developed a comprehensive system connecting tenants and landlords, allowing users to easily browse, book, and manage property listings.

Software & Frontend Development:

- Collaborated on "Prezence," a software project, leading the technical documentation, report structuring, and presentation design.
- Designed and built a fully responsive personal portfolio website utilizing React and Tailwind CSS.

University Student Portal System:

- Led the complete front-end development and UI/UX design for a comprehensive university web portal utilizing React and Tailwind CSS.
- Designed and implemented interactive, highly responsive dashboards that allow students to seamlessly navigate academic records, course materials, and real-time announcements.
- Collaborated closely with backend developers to integrate REST APIs, ensuring fast and dynamic data rendering across all devices.
